

The Energy Forum of Turkey was established in 2001, at the time the energy market emerged in Turkey, with a view to ensure that the energy industry develops in a competitive manner and to increase the role that energy plays in the society's development.

The Forum aims to identify the common problems that the industry faces in integrating to the global structure and find actionable solutions. The Forum thus provides a platform for industrialists, investors, suppliers and consumers to come together and share their knowledge and experiences so as to come up with solutions to their common challenges.

Neslihan Gökdemir is the Founder and President of the ENERGY FORUM OF TURKEY.
